

Vera Therapeutics Announces Closing of Upsized Public Offering of Class A Common Stock and Full Exercise of Underwriters' Option to Purchase Additional Shares

February 14, 2022

BRISBANE, Calif., Feb. 14, 2022 (GLOBE NEWSWIRE) -- Vera Therapeutics, Inc. ("Vera"), a late-stage biotechnology company focused on developing and commercializing transformative treatments for patients with serious immunological diseases, today announced the closing of its public offering of 5,742,026 shares of its Class A common stock at a price to the public of \$15.00 per share, which includes the full exercise of the underwriters' option to purchase up to 748,959 additional shares. The gross proceeds to Vera from the offering, before deducting the underwriting discounts and commissions and estimated offering expenses, are approximately \$86.1 million. All of the shares were sold by Vera.

J.P. Morgan, Cowen, and Evercore ISI acted as joint book-running managers for the offering.

Registration statements relating to these securities have been filed with the U.S. Securities and Exchange Commission (SEC) and became effective on February 9, 2022 and February 10, 2022. This press release shall not constitute an offer to sell or a solicitation of an offer to buy, nor shall there be any sale of these securities in any state or jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such state or jurisdiction.

About Vera

Vera Therapeutics is a late-stage biotechnology company focused on developing treatments for serious immunological diseases. Vera's mission is to advance treatments that target the source of immunologic diseases in order to change the standard of care for patients. Vera's lead product candidate is atacicept, a fusion protein self-administered as a subcutaneous injection once weekly that blocks both B lymphocyte stimulator (BLyS) and a proliferation inducing ligand (APRIL), which stimulate B cells and plasma cells to produce autoantibodies contributing to certain autoimmune diseases, including IgA nephropathy (IgAN), also known as Berger's disease and lupus nephritis. In addition, Vera is evaluating additional diseases where the reduction of autoantibodies by atacicept may prove medically useful. Vera is also developing MAU868, a monoclonal antibody designed to neutralize infection with BK Virus, a polyomavirus that can have devastating consequences in certain settings such as kidney transplant.
